

Planning Committee Tuesday, 30 June 2020

Written question from Mr Edwards to the Chairman of the Planning Committee.

Although Southern water has previously indicated sewer capacity issues in the public sewers in the area the application for 50 dwellings was approved 20 December 2016. Several of the dwellings appear to be almost complete.

How is the foul sewage from this development to be discharged to existing sewerage network in Gunville? Please provide details of the requirement of

- a) A foul sewage holding tank with pumping station**
- b) Upgrading any part of the existing sewerage network**

Response

The foul sewage for the development would be pumped to the existing network. Discussions have taken place between the developers drainage consultant and Southern Water. All drainage details, information and correspondence is available to view on the Council website, under the application reference.
