EXTERNAL CONTEXT
For the year ended 31 March 2016

APPENDIX C

Growth, Inflation, Employment: The UK economy slowed in 2015 with GDP growth falling to 2.3% from a robust 3.0% the year before. CPI inflation hovered around 0.0% through 2015 with deflationary spells in April, September and October. The prolonged spell of low inflation was attributed to the continued collapse in the price of oil from $67 a barrel in May 2015 to just under $28 a barrel in January 2016, the appreciation of sterling since 2013 pushing down import prices and weaker than anticipated wage growth resulting in subdued unit labour costs. CPI picked up to 0.3% year/year in February, but this was still well below the Bank of England's 2% inflation target. The labour market continued to improve through 2015 and in Q1 2016, the latest figures (Jan 2016) showing the employment rate at 74.1% (the highest rate since comparable records began in 1971) and the unemployment rate at a 12 year low of 5.1%. Wage growth has however remained modest at around 2.2% excluding bonuses, but after a long period of negative real wage growth (i.e. after inflation) real earnings were positive and growing at their fastest rate in eight years, boosting consumers' spending power.

Global influences: The slowdown in the Chinese economy became the largest threat to the South East Asian region, particularly on economies with a large trade dependency on China and also to prospects for global growth as a whole. The effect of the Chinese authorities' intervention in their currency and equity markets was temporary and led to high market volatility as a consequence. There were falls in prices of equities and risky assets and a widening in corporate credit spreads. As the global economy entered 2016 there was high uncertainty about growth, the outcome of the US presidential election and the consequences of June's referendum on whether the UK is to remain in the EU. Between February and March 2016 sterling had depreciated by around 3%, a significant proportion of the decline reflecting the uncertainty surrounding the referendum result.

UK Monetary Policy: The Bank of England's MPC (Monetary Policy Committee) made no change to policy, maintaining the Bank Rate at 0.5% (in March it entered its eighth year at 0.5%) and asset purchases (Quantitative Easing) at £375bn. In its *Inflation Reports* and monthly monetary policy meeting minutes, the Bank was at pains to stress and reiterate that when interest rates do begin to rise they were expected to do so more gradually and to a lower level than in recent cycles.

Improvement in household spending, business fixed investment, a strong housing sector and solid employment gains in the US allowed the Federal Reserve to raise rates in December 2015 for the first time in nine years to take the new Federal funds range to 0.25%-0.50%. Despite signalling four further rate hikes in 2016, the Fed chose not to increase rates further in Q1 and markets pared back expectations to no more than two further hikes this year.

However central bankers in the Eurozone, Switzerland, Sweden and Japan were forced to take policy rates into negative territory. The European Central Bank also announced a range of measures to inject sustained economic recovery and boost domestic inflation which included an increase in asset purchases (Quantitative Easing).

Market reaction: From June 2015 gilt yields were driven lower by the a weakening in Chinese growth, the knock-on effects of the fall in its stock market, the continuing fall in the price of oil and commodities and acceptance of diminishing effectiveness of central bankers' unconventional policy actions. Added to this was the heightened uncertainty surrounding the outcome of the UK referendum on its continued membership of the EU as well as the US presidential elections which culminated in a significant volatility and in equities and corporate bond yields.

10-year gilt yields moved from 1.58% on 31/03/2015 to a high of 2.19% in June before falling back and ending the financial year at 1.42%. The pattern for 20-year gilts was similar, the yield rose from 2.15% in March 2015 to a high of 2.71% in June before falling back to 2.14% in March 2016. The FTSE All Share Index fell 7.3% from 3664 to 3395 and the MSCI World Index fell 5.3% from 1741 to 1648 over the 12 months to 31 March 2016.

Update as at 30 June 2016

As we entered 2016, there was a significant uncertainty about the outlook for global growth. The slowdown in the Chinese economy and the knock-on effects for both trading partners and commodity prices, the uncertainty over the outcome of the US presidential election (no clear party or candidate being identified as an outright winner) and the impending referendum on the UK's future relationship with the EU, all resulted in nervousness and a shaky start for markets.

Data released in the April-June quarter showed UK GDP at 2% year/year to March 2016 and annual inflation at 0.3% in May. Core inflation remained subdued as a consequence of weak global price pressures, past movements in sterling and restrained domestic price growth. Internationally, a modest pace of growth in the UK's main trading partners remained the most likely prospect.

Fluctuations in the opinion polls on the EU referendum prompted pronounced volatility in exchange rates, gilts, corporate bonds and equities as the result became increasingly uncertain. Immediately prior to the result, financial market sentiment shifted significantly in favour of a Remain outcome, a shift swiftly reversed as the results came in. The vote to leave the EU sent shockwaves through the domestic, European and global political spectrum, the most immediate impact being the resignation of Prime Minister David Cameron.

Between 23rd June and 1st July the sterling exchange rate index fell by 9% and short-term volatility of sterling against the dollar increased significantly. Worldwide, markets reacted very negatively with a big initial fall in equity prices. Government bond yields also fell sharply by 20-30 basis points across all maturities (i.e. prices rose) as investors sought safe haven from riskier assets. The 10-year benchmark gilt yield fell from 1.37% to 0.86%.

Yet, a week on from the result the overall market reaction, although significant, was less severe than some had feared. The 5-year CDS for the UK (the cost of insuring against a sovereign default) rose from 33.5 basis points to 38.4 basis points. The FTSE All Share index, having fallen sharply by 7% from 3,481 points on 23rd June to 3,237 after the result, had subsequently risen to 3,515 by the end of the month.

The Bank of England sought to reassure markets and investors. Governor Mark Carney's speeches on 24th and 30th June in response to the referendum result stressed that the Bank was ready to support money market liquidity and raised the likelihood of a cut in policy rates 'in the summer'. The door was also left open for an increase in the Bank's asset purchase facility (QE). The Governor noted that the Bank would weigh the downside risks to growth against the upside risks to inflation from fall in the value of sterling.
